Bois | Forum Construction Lyon 2016

6th International Wood Construction Forum
Cité internationale | Centre de Congrès de Lyon
April 13 - 15, 2016

COP21, the assets of wood

The December 2015 Parisian conference on climate change was heralded as a success. In its wake, we are called to quotidian action. The act of building engages us for decades, precisely those in which global warming will raise the planet's temperatures over 2°C. Good news: wood offers the possibility of progress towards constructive practices with positive effects. But with several conditions: wood cannot be relied upon for everything; rather, it should be intelligently combined with insulating materials, especially bio-based materials, and at times with traditional materials – not to mention the possibilities of adapting the existing material. None of this will be realized without the powers in charge come to awareness of all of the potentials that wood offers in modernizing construction. This is precisely why the Forum convenes once again, for the sixth consecutive year, to gather together the contracting authorities and decision-makers in the wood construction industry. After Beaune, Besançon and Nancy, the Forum will take place this year in Lyon, the new capital of a major region in wood construction. This move to the capital of the Gauls will be hailed in by an innovation: several scientifically oriented seminars will compliment the ten thematically related seminars to develop a deeper understanding of the technical and architectural information.

Françoise-Hélène Jourda (†) received by Raphaëlle Laure Perraudin

Françoise-Hélène Jourda, a powerful figure in the international debate on the role of architecture and architects in the era of significant transitions, passed on May 31, 2015. Pioneer of responsible architecture, Françoise-Hélène Jourda (born in 1955 in Lyon) was known for her long-term engagement to a constructive approach to economic, social, environmental, and human dimensions of durable development.
Tribute: Dominique Gauzin-Müller, Ecologik, FR-Paris

Dominique Calvi

Dominique Calvi directed the eponymous research unit specialized in wood construction in Les Angles. He worked on numerous exceptional projects (road bridges, the Centre Pompidou of Metz, the Stade of Nice). Seen as both a reference and a trailblazer, Dominique Calvi created and presided over IBC (Ingénierie Bois Construction) and participated in a number of national and European wood construction commissions. As a longtime professor associated with ENSTIB, he was in charge of the advanced master's degree CHEB, born from the partnership between ENSTIB and the CHEC in Paris.

ikos Architecture and wood construction
consultant in the Tyrol (Austria and Italy)

In partnership with the Wood Construction Forum, Ikos Consultant offers an educational trip / interprofessional course in the Tyrol from **April 28 to May 1, 2016**. In the program, visits are alternated with lectures in situ or indoors, allowing for a discovery of industrial production sites and construction companies, of construction sites and finished buildings; the objective being to benefit from professionals' feedback on projects. This initiative situates itself in the continuity of the Forum's seminars as it welcomes Italy as this edition's guest country.
